

Precision Causticity Control Skid

Automated “set-and-forget” causticity control

- Saves money by providing accurate dilution blending
- Repeatable blending yields best use of chemical with optimized cleaning results
- Unique filtration approach cleans up “spent CIP” online while saving wasted sodium hydroxide (NaOH)
- Isolates and concentrates “biologicals” for removal or delivery to Methanator
- System eliminates sand build-up and “beer stones” extending spray ball performance
- Filter is automated and extremely low maintenance
- Improves ethanol production efficiency by eliminating potential for bacterial attack

Stretch your chemical dollars by automating the CIP filtration process. Allows for accurate control of caustic percentage while minimizing maintenance issues and manual blending mistakes.
