

Maximum Sieve Valve Performance

Increase Dehydration Availability, Reduce
Down Time

- BioFuels Automation Modified, BX2000 High Performance Butterfly Valve offers special features to improve lifecycle
- Handles sieve dust excursions with unique bearings that withstand higher temperatures and higher radial and lateral loads
- PFA encapsulated O-Rings supported by Teflon washers prevent damage to shaft bearings from fine solids
- Allows for extended maintenance cycle while improving dehydration yields
- Minimizes challenge with typical valve leakage and wear

Maximize your operational process up- time
and profitability through improved valve
technology
